“Most of it is completely inhospitable and hostile to life” is a general objection to a general teleological argument on the cosmological level (like how the argument from bad design is an objection to a general teleological argument on the biological level).

In chemistry, molecular orbital (MO) theory is a method for describing the electronic structure of molecules. Electrons are not assigned to individual bonds between atoms, but are treated as moving under the influence of the nuclei in the whole molecule. The spatial and energetic properties of electrons are described by quantum mechanics as atomic or molecular orbitals that contain these ...

Special cases Electrical mobility equation. For a particle with electrical charge q , its electrical mobility μ is related to its generalized mobility $\hat{\mu}$ by the equation $\hat{\mu} = \mu q / q$. The parameter $\hat{\mu} q$ is the ratio of the particle's terminal drift velocity to an applied electric field. Hence, the equation in the case of a charged particle is given as

Table 1: The four levels/modes of processing. Figures 3, 4, and 5 show how within the processing model, cognition depends upon context. The effectiveness of the contribution of processing activities at each of these levels / modes, depends on the cognitive requirements posed by the specific context.

7. Experiencing is essentially an interaction between feeling and "symbols" (attention, words, events), just as body life is an interaction between body and environment. In its basic nature, the physical life process is interaction. (This is an application of Sullivan's basic concepts.)
