The knight's tour problem is an instance of the more general Hamiltonian path problem in graph theory. The problem of finding a closed knight's tour is similarly an instance of the Hamiltonian cycle problem. Unlike the general Hamiltonian path problem, the knight's tour problem can be solved in linear time.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

These operators will "operate" on a wave function,  $\Psi$ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.

by Frank Bosse. A few days ago a paper (Sato et al) dealing with some aspects of the "Aerosol Cloud Interactions" (ACI, also called "aerosol indirect effects") was released. It bolsters the conclusions of earlier papers: the effective radiative forcing from ACI (ERFaci) is smaller than thought, perhaps near zero .. A discussion of Malavelle et al. (2017) and Stevens (2017), an ...

QUESTION: I have a question about finding the distance that a spring has been stretch using Hooke's Law vs. conservation of energy and the elastic potential energy equation.

### Ask the Physicist!

As a prototypical photocatalyst, TiO<sub>2</sub> is a material of scientific and technological interest. In photocatalysis and other applications, TiO<sub>2</sub> is often reduced, behaving as an n-type semiconductor with unique physico-chemical properties. In this review, we summarize recent advances in the understanding of the fundamental properties and applications of excess electrons in reduced, undoped TiO<sub>2</sub>.

### Excess electrons in reduced rutile and anatase TiO<sub>2</sub>

Scientists propose that clocks measure the numerical order of material change in space, where space is a fundamental entity; time itself is not a fundamental physical entity. Image credit ...
