Numerical Analysis Chapter 4 Interpolation and Approximation 4.1 Polynomial Interpolation Goal Given $n+1$ data points $(x_0, y_0), (x_1, y_1), \dots, (x_n, y_n)$, to find the polynomial of degree less than or equal to n that passes through these points.

Interpolation, Approximation and Their Applications

Interpolation and Approximation Theory Finding a polynomial of at most degree n to pass through $n+1$ points in the interval $[a, b]$ is referred to as interpolation. Approximation theory deals with two types of problems.

Polynomial Interpolation and Approximation

Polynomial interpolation The most common functions used for interpolation are polynomials. Given a set of $n+1$ data points (x_i, y_i) , we want to find a polynomial curve that passes through all the points.

Part II: Interpolation and Approximation theory

Polynomial Approximation, Interpolation, and Orthogonal Polynomials In the last chapter we saw that the eigen-equation for a matrix was a polynomial whose roots were the eigenvalues of the matrix. However, polynomials play a much larger role in numerical analysis than providing just eigenvalues. ...

Lecture 1: Interpolation and approximation (Compiled 16 August 2017) In this lecture we introduce the concept of approximation of functions by a linear combination of a finite number of basis functions. In particular we consider polynomial interpolation and introduce various forms of the polynomial interpolant.
