

lithium ion batteries hazard pdf

A lithium-ion battery or Li-ion battery (abbreviated as LIB) is a type of rechargeable battery in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery.

Recharge lead acid and lithium-ion batteries periodically. Storing a lead-acid battery at a very low charge state can cause permanent crystal formation (sulfation) that reduces capacity. Lithium-ion batteries at low charge can develop copper structures that short the battery, making it dangerous to use. The exact recharge instructions depend on the battery design.
