Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI does not involve X-rays or the use of ionizing radiation, which distinguishes ...

Footnotes for Framingham point scoring ** Note: Framingham risk scoring for men and women is presented in the Appendix below.. Aetna considers hs-CRP testing experimental and investigational for all other indications, including use as a screening test for the general population and for monitoring response to therapy, because its clinical value for these uses has not been established.
