Optimal tax theory or the theory of optimal taxation is the study of designing and implementing a tax that maximises a social welfare function subject to economic constraints. The social welfare function used is typically a function of individuals' utilities, most commonly a utilitarian function, so the tax system is chosen to maximise the sum of individual utilities.

A carbon tax is a tax levied on the carbon content of fuels. It is a form of carbon pricing. Revenue obtained via the tax is however not always used to compensate the carbon emissions on which the tax is levied (see implementation). Carbon is present in every hydrocarbon fuel (coal, petroleum, and natural gas) and converted to carbon dioxide (CO<sub>2</sub>) and other products when combusted.
