Scalability is the capability of a system, network, or process to handle a growing amount of work, or its potential to be enlarged to accommodate that growth. For example, a system is considered scalable if it is capable of increasing its total output under an increased load when resources (typically hardware) are added.

A few multi-metal-based systems were created to probe the regulation mechanism in electrocatalytic reactions. This work investigates a set of unique models of electrocatalysts based on the supertetrahedral metal sulfide nanoclusters with tunable multi-metal (Mn, Co, Zn) sites, which show an obvious synergistic effect on enhancing the electrocatalytic activities in hydrogen evolution reaction.
