INFORMATION SECURITY LECTURE NOTES

Computer security is the protection of the items you value, called the assets of a computer or computer system. There are many types of assets, involving hardware, software, data, people, processes, or combinations of these. To determine what to protect, we must first identify what has value and to whom.

Security in Computing - pearsoncmg.com

building computer systems took the position that internal computer controls (those that are embodied in software within the operating system) could effectively limit the access of users to authorized information only. For a number of years many were lulled into the belief that computer security was a "people problem" that could be addressed by encouraging people to follow the "rules of the road".

BUILDING A SECURE COMPUTER SYSTEM - cs2

Any part of a computing system can be the target of a crime. When we refer to a computing system,¹ we mean a collection of hardware, software, storage media, data, and people that an organization uses to

perform computing tasks. Sometimes, we assume 4 Chapter 1 Is There a Security Problem in Computing?
