selection of seed grains pdf

Traditional farmers grow mixtures. This allows nature and farmers to co-evolve a locally-adapted landrace. Current research confirms that wheat mixtures tend to yield higher and have richer, complex flavor. Plant each seed 12" apart in deep-dug well-fertilized soil. Plant a low-growing clover or spread mulch between wheats to suppress spring weeds.

A seed bank (also seedbank or seeds bank) stores seeds to preserve genetic diversity; hence it is a type of gene bank. There are many reasons to store seeds. One is to have available the genes that plant breeders need to increase yield, disease resistance, drought tolerance, nutritional quality, taste, etc. of crops. Another is to forestall loss of genetic diversity in rare or imperiled plant ...

Seed bank - Wikipedia

A landrace is a domesticated, locally adapted, traditional variety of a species of animal or plant that has developed over time, through adaptation to its natural and cultural environment of agriculture and pastoralism, and due to isolation from other populations of the species. Landraces are generally distinguished from cultivars, and from breeds in the standardized sense, although the term ...

Seed Selection To maximize forage production, select a variety bred for forage production and not a grain

type. Grain types tend to mature earlier than forage types which usually translates to less yield and lower forage quality.

Teff Grass - Growing Teff

Through years of trialing and selection, we've developed a line of microgreens noted for diverse flavors, colors, and textures. For growers, microgreens are increasingly popular because they're a year-round crop with fast turnaround, relatively easy to grow, and start-up costs are low.
