Computer data storage, often called storage or memory, is a technology consisting of computer components and recording media that are used to retain digital data.It is a core function and fundamental component of computers.: 15â€“16 The central processing unit (CPU) of a computer is what manipulates data by performing computations. In practice, almost all computers use a storage hierarchy ...

A thermionic diode is a thermionic-valve device consisting of a sealed, evacuated glass or metal envelope containing two electrodes: a cathode and a plate. The cathode is either indirectly heated or directly heated. If indirect heating is employed, a heater is included in the envelope. In operation, the cathode is heated to red heat (800–1000 °C).
