Measures of game complexity State-space complexity. The state-space complexity of a game is the number of legal game positions reachable from the initial position of the game.. When this is too hard to calculate, an upper bound can often be computed by including illegal positions or positions that can never arise in the course of a game.. Game tree size. The game tree size is the total number ...

In game theory, a game tree is a directed graph whose nodes are positions in a game and whose edges are moves. The complete game tree for a game is the game tree starting at the initial position and containing all possible moves from each position; the complete tree is the same tree as that obtained from the extensive-form game representation.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
