Healthy marine species like whales, sea turtles, coral, and salmon are important for maintaining balanced and thriving ocean ecosystems. We work to prevent marine species populations from decline and extinction, protect them from human activities, and monitor activities that might impact them so they are around for future generations.

The Black-footed Ferret is an endangered species of small mammals that were considered to be extinct in 1979 for its apparent unavailability, until it was rediscovered two years later. These mustelids were then bred in captivity by the United States Fish and Wildlife Service and were reintroduced in different parts of the USA and Mexico between 1991 and 2008.
