Horse meat forms a significant part of the culinary traditions of many countries, particularly in Europe, South America and Asia. The top eight countries consume about 4.7 million horses a year. For the majority of humanity's early existence, wild horses were hunted as a source of protein. Due to ethical objections and unfamiliarity with the meat, horse meat is a taboo food in some cultures.

The Icelandic horse is a breed of horse developed in Iceland. Although the horses are small, at times pony-sized, most registries for the Icelandic refer to it as a horse. Icelandic horses are long-lived and hardy. In their native country they have few diseases; Icelandic law prevents horses from being imported into the country and exported animals are not allowed to return.
