The Large Hadron Collider (LHC) is the world's largest and most powerful particle collider and the largest machine in the world. It was built by the European Organization for Nuclear Research (CERN) between 1998 and 2008 in collaboration with over 10,000 scientists and hundreds of universities and laboratories, as well as more than 100 countries. It lies in a tunnel 27 kilometres (17 mi) in ...

The Very Large Hadron Collider (VLHC) is a hypothetical future hadron collider with performance significantly beyond the Large Hadron Collider.. There is no detailed plan or schedule for the VLHC; the name is used only to discuss the technological feasibility of such a collider and ways that it might be designed.

Thanks for adding your replies. This is what I like about this group. Now I have a couple of problems with this article, the first of which was that the hadron collider was not designed to test for ghosts or anything of the sort.

\* CERN has predicted that micro black holes might be created by the Large Hadron Collider at a rate of 1 per second, however most scientists agree that scientists do not know if micro black holes will in fact be created. Of the small number of scientists who studied this issue in depth, a few have publicly expressed concern that if micro black holes or strange matter are created at rest on ...
